

How might we link accessibility features to how users interact in the real world?

How might we enable users to understand how different accessibility features can relate to

Specific ~~impairment~~ specific disabilities, disabilities.

How
↳ enable users to quickly access the content they need.

How might

How
↳ present content in a way that is as easy to read as possible.

Hmw

- Enable users to find out what specific accessibility terms mean)

we statements

Hmw

enable users to understand how certain features accessibility confers impact the quality of the user experience of disabled users)

Hmw

enable developers and designers (occusers) to understand why accessibility is important

y
to
and
understand.)
